Nu Html Checker

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

Showing results for contents of text-input area (checked with vnu 26.2.16)

Checker Input

Show ☐ source ☐ outline ☐ image report ☐ errors & warnings only Options…

Check by text input ☐ check as CSS

```
                    <p>My passion became more focused in high school when I took
my first actual programming class in Java. These interests eventually led me to
High Point University. I chose HPU for numerous reasons, but once I learned about
how personalized the Computer Science program was, I became very interested. The
tools and resources we have access to like the computer lab, servers, and up-to-
date cyber security tools and applications, seemed like they would help prepare
me for the workforce. HPU has taken me down many unexpected career exploration
paths, primarily through internships and hands-on experiences.</p>

                    <p>I eventually landed an internship at Disciples Capital,
where I work as a Software Engineer programming machine learning trading
pipelines. It was a field I never expected to find enjoyment in initially, but it
has become a new passion of mine. Outside of academics and work, I enjoy
continuing to explore new technologies, gaming, and collecting trading card
games. I am always looking for new challenges and opportunities to grow both
personally and professionally.</p>
                </div>
